

# -Metadata Extraction and standardized Metadata handling

Data about data (Metadata) is commonly and widely used to describe what a piece of data is about. Pictures as well as Text – Documents, are using special tags to store and handle metadata information. The goal of this work is to find and compare tools for metadata extraction. Explain how those tools store and handle extracted metadata. Furthermore those tools will help to answer the research question: *How should a standardized extraction model for metadata look like?*

Further information you need to know:

- write in English/German
- knowledge about: XML/RDF
